

HORSE HAYTEC

Haymatic® 3 automatic hay feeder

The Haymatic® 3 automatic hay feeder has three rising feeding walls as well as one enclosed wall for bale change. The automatic hay feeder has nine feeding slots. Haymatic® opens up to 12 times a day, guaranteeing a regular supply of hay for horses. Flexibly adjust the feeding intervals, their length and the height of the feeding walls yourself.

When the hay feeder is placed next to a fence, you can easily change the bale from the outside without disturbing the horses.

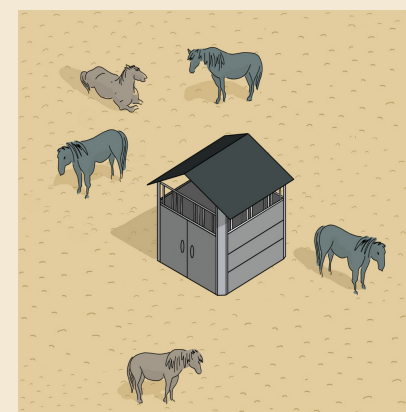

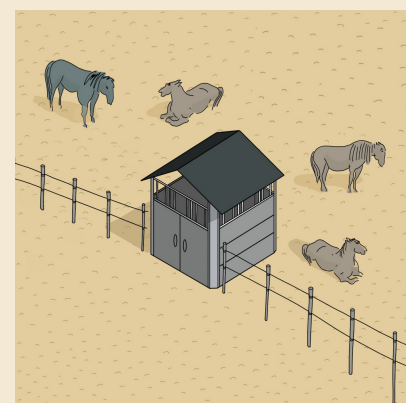

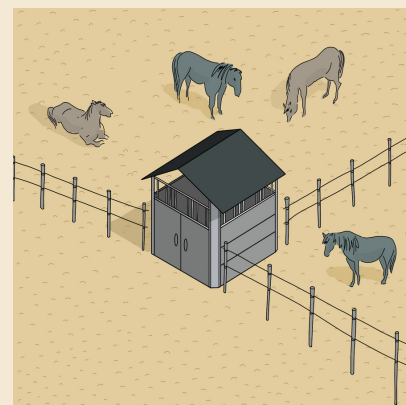

With the New Bale feature, you can also reduce hay waste. The rising walls can be set to a specified height to support the amount of hay inside, for example, for four days.

Thanks to the low-rise base, you can even roll the bale inside.

Haymatic® 3 can also be converted to Haymatic® 4.

**Haymatic® 3 – €6,900 (VAT 0%)
+ roof package €430 (VAT 0%) & freight**

The VAT for horse entrepreneurs is 0%. For private persons, the value-added tax of their country of residence is added to the price.

Dimensions:

- Machine length/width: 2050 mm
- Machine height: 2600 mm
- Internal dimension: 1800×1800 mm
- Base height: 60 mm
- Weight: 400–500 kg, depending on equipment

Other information:

- IP code of electrical components: IP54
- Power supply: 230 V
- Engine power: 0.25/0.37 kW
- Operating temperature: -25 to +30 °C
- Warranty: 2 years
